Boolean algebra (Any one solution)

<p>Solution.</p> $ \begin{aligned} & A.B + A'.C + B.C.1 && (A.1=A) \\ & = A.B + A'.C + B.C.(A + A') && (A + A' = 1) \\ & = A.B + A'.C + B.C.A + B.C.A' && (\text{Distributive law}) \\ & = A.B + A'.C + A.B.C + A'.B.C && (\text{Associative law}) \\ & = A.B + A.B.C + A'.C + A'.B.C && (\text{Commutative law}) \\ & = A.B.(1 + C) + A'.C(1 + B) && (\text{Distributive law}) \\ & = A.B.1 + A'.C.1 && (1 + B = 1, 1 + C = 1) \\ & = A.B + A'.C && (A.1 = A) \end{aligned} $	<p><u>Answer to the Question-NO.4</u></p> $ \begin{aligned} \textcircled{a} \quad F &= AB + BC + A'C \\ &= AB(c+c') + Bc(A+A') + A'c(B+B') \\ &= ABc + ABc' + ABc + A'bc + A'cb + A'cb' \\ &= ABc + ABc' + A'bc + A'cb' \\ &= AB(c+c') + A'c(B+B') \\ &= AB + A'c \\ &\quad (Ans.) \end{aligned} $
--	--

$$F = AB + BC + A'C$$

$$= AB + A'C + BC$$

$$= AB + A'C + BC \cdot 1$$

$$= AB + A'C + BC \cdot (A + A')$$

$$= AB + A'C + ABC + A'BC$$

$$= AB + ABC + A'C + A'BC$$

$$= AB(1 + C) + A'C(1 + B)$$

$$= AB(C + 1) + A'C(B + 1)$$

$$= AB \cdot 1 + A'C \cdot 1$$

$$= AB + A'C$$

(Ans)

Ans. to the Q. no-1

(a)

The range of an 8 bit 2's complement number system is from $-2^{(8-1)} = -128$ to $2^{(8-1)} - 1 = 127$ in decimal number system.

(b)

$$+(73)_{10} = +(01001001)_2$$

$$-(35)_{10} = -(00100011)_2$$

$$\therefore +(73)_{10} = (01001001)_{1's}$$

$$-(35)_{10} = (11011100)_{1's}$$

$$\text{And, } +(73)_{10} = (01001001)_{2's}$$

$$-(35)_{10} = (11011101)_{2's}$$

Sign - Magnitude number system :

$$+(73)_{10} = (01001001)_{\text{sign-mag}}$$

$$-(35)_{10} = (10100011)_{\text{sign-mag}}$$

c) Subtract -35 from 73

2's complement,

$$-35 = 11011101$$

$$+35 = 00100011$$

Now,

$$73 = 01001001$$

$$35 = 00100011$$

$$(18) = 01101100$$

$$73 - (-35)$$

$$= 73 + 35$$

$$= 108$$

d) $73 = 01001001$

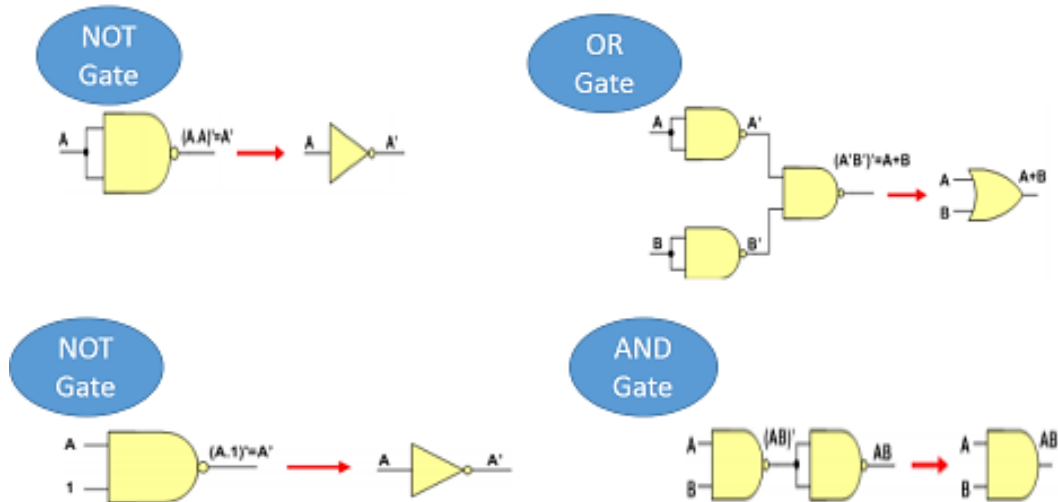

$$35 = 00100011$$

$$01101100$$

It is not an overflow because the same sign bits gives the same sign bit.

Construct Gates

Using NAND

Kmap Solution

Design example : 2-bit multiplier (SOLUTION)
